Authorized to work in the United States without visa sponsorship

EDUCATION

The Pennsylvania State University **University Park, PA**
Bachelor of Science in Industrial Engineering, 3.4/4.0 CGPA *May 2025*

TECHNICAL SKILLS

Python, Git, Linux (CLI), Claude Code, Lean Six Sigma Green Belt, MATLAB, SolidWorks, 3DXpert

EXPERIENCE

Penn State Capstone — Echogen Power Systems **University Park, PA**
(First Place: Lockheed Martin Best Project Award) *January 2025 – May 2025*
Industrial Engineering & Project Scheduling Lead

- Collaborated on the development of a TPMS-based heat exchanger core using additive manufacturing (AM) methods, developing the AM workflow in 3DXpert for future LPBF metal production, aligning with scalability and production readiness goals
- Scoped, scheduled, and tracked all project milestones for a cross-functional team designing the heat exchanger, coordinating deliverables across mechanical, manufacturing, and cost analysis workstreams, directly mirroring management workflows
- Performed capital cost analysis for full-scale production (evaluating Inconel 625 material costs, DMP 500 printer throughput, and auxiliary system requirements) to support capital planning

Larsen & Toubro Heavy Engineering **Surat, India**
Industrial Engineering Intern *June 2023 – August 2023*

- Collaborated cross-functionally with production, maintenance, and quality control teams to investigate and resolve operational bottlenecks, achieving a 16% OEE improvement in 3 months
- Communicated regularly with various departments, including production, maintenance, and quality control, to ensure seamless operations and timely project execution
- Assisted in the implementation of Total Quality Management initiatives and the evaluation of different departments, contributing to a culture of continuous improvement within the organization

Nittany Motorsports **University Park, PA**
Chassis Team *September 2022 – May 2025*

- Contributed to design, manufacturing, and testing of the carbon fiber monocoque, nosecone, and roll hoops improving structural integrity through recurring testing of materials
- Coordinated with suspension and electronics subsystems to integrate mounting points for the drivetrain team and accommodate design changes through continuous cross-functional communication and change management

PROJECTS

TPM Dashboard *April 2026*
Personal Project

- Engineered a program management system on real Tesla vehicle software update data, structuring 1,782 features across 7 groups, 20 subgroups, lifecycle stages, and a risk register with date-aware filtering across 118 software versions from January 2023 to April 2026
- Built end to end from a Python web scraper to a deployed web application, enabling point-in-time visibility into feature status, engineer workload, and open risks at any date or version window
- Designed cross-functional release workflows mapping feature ownership, bottlenecks, and risk mitigation across engineering teams
